Re: EucoBond LS – LEED™ Product Information

To Whom It May Concern:

The LEED (Leadership in Energy and Environmental Design) Green Building Rating System provides a standard for defining an environmentally friendly, sustainable, “green” building. Points are awarded to construction projects based on building characteristics like water savings, energy efficiency, indoor air quality, and the types of building materials used. The Euclid Chemical Company manufactures many products that can contribute points toward the LEED certification of a building.

EucoBond LS may contribute to the LEED points of a building based on its “low-emitting” qualities (EQ); this product has a volatile organic compound (VOC) content of 153 g/L. EucoBond LS is manufactured outside of the U.S. and therefore does not contribute to a building’s LEED point calculation under category “Local/Regional Materials Manufactured Locally” (MR Credit 5.1).

No single extracted material is used to produce the majority of this product. Additionally, all raw materials come from one of several sources which in-turn come from one of several raw material feed stocks. As such, point source for the raw materials cannot be determined. No recycled or reused materials are used in the manufacture of EucoBond LS.

Sincerely,

Jennifer Crisman  
Senior Product Marketing Manager, Construction Products
