Re: **Dural 340 NS, SL** – LEED™ Product Information

To Whom It May Concern:

Euclid Chemical, as a company, is committed to quality, responsive to internal and external customers, our employees, our community and environment, and we will treat all with respect and good stewardship.

The LEED™ (Leadership in Energy and Environmental Design) Green Building Rating System provides a standard for defining an environmentally friendly, sustainable, "green" building. Points are awarded to construction projects based on building characteristics like water savings, energy efficiency, indoor air quality, and the types of building materials used. The Euclid Chemical Company manufactures many products that can contribute points toward the LEED™ certification of a building.

Dural 340 NS, SL can contribute to LEED™ points of a building based on its "low-emitting" qualities, Indoor Environmental Quality (EQ) Credit. This product a has volatile organic compound (VOC) content of **0** g/L (grams per liter.)

Dural 340 NS, SL is manufactured in **Sheffield, IL**. If **Sheffield, IL** falls within a 500-mile radius of the project site, the product is considered to be a locally produced material and can help contribute to earning (MR) Regional Materials Credit.

No single extracted material is used to produce the majority of this product. Additionally, all raw materials come from one of several sources which in-turn come from one of several raw material feed stocks. As such, point source for the raw materials cannot be determined.

If you have any further questions please contact me at 800-321-7628.

Respectfully submitted,
