

EVERCLEAR - BREATHABLE 100% ACRYLIC CONCRETE SEALER

Clearly the Superior Sealer

EVERCLEAR is a breathable, 100% acrylic sealer that protects and enhances the appearance of concrete with a clear, non-yellowing seal that is harder and more durable than standard cure and seal products. EVERCLEAR is specially formulated to enhance the color of stamped concrete, exposed aggregate, and colored concrete pavers, giving these surfaces a deeper, richer appearance. Also ideal for sealing residential concrete pavements, EVERCLEAR provides excellent protection against the damaging effects of weather, traffic and de-icing salts while allowing concrete to "breathe". EVERCLEAR gives concrete a subtle, satin finish that highlights the color and texture of surfaces without excessive shine or slipperiness.

The Acrylic Advantage

The resin in EVERCLEAR is a pure, 100% acrylic – this is key to the product's superior benefits. Traditional curing and sealing compounds are formulated with a blend of both styrene and acrylic polymers. While the styrene provides the curing, or moisture retention ability of a cure and seal, it can be unstable under ultraviolet light, causing discoloration in sunlight. In addition, styrene polymers are softer than acrylics, and will scratch and wear off easier than a pure acrylic. EVERCLEAR is a sealer that contains no styrene. This equals significantly increased breathability and long-term clarity of the applied EVERCLEAR film.

Benefit with Breathable Technology

- EVERCLEAR allows moisture in the concrete to evaporate through the sealer film
- EVERCLEAR will not turn white, peel or flake off due to moisture vapor transmission
- EVERCLEAR is a solvent-based product that meets all the Federal EPA VOC regulations
- EVERCLEAR is more durable than conventional curing and sealing products
- EVERCLEAR will never turn yellow in sunlight

FEATURES

- 100% acrylic formula
- Breathable film
- Specifically formulated to protect and beautify decorative concrete
- Compatible with other solvent-based Euclid Chemical cure and seals
- Meets all Federal EPA VOC regulations

BENEFITS

- Enhances color of stamped and colored concrete
- Protects concrete from weathering: rain, salt, sun
- More durable, scratch and scuff resistant than traditional cure & seals
- Non-yellowing
- Easily applied with sprayer or roller

PRIMARY APPLICATIONS

- Stamped concrete
- Terrazzo
- Driveways and sidewalks
- Acid-stained concrete
- Concrete pavers
- Natural stone
- Stenciled concrete overlays

THE EUCLID CHEMICAL COMPANY ... EXPERTS IN CONCRETE PROTECTION

Water-Based Solutions for Curing and Sealing Concrete

Properly curing concrete ensures that desired properties such as strength and durability develop. As VOC restrictions continue to tighten across the country, Euclid Chemical is committed to providing innovative, water-based options for curing and sealing concrete.

DIAMOND CLEAR VOX and AQUA-CURE VOX

The DIAMOND CLEAR VOX and AQUA-CURE VOX family of products are water-based cure and seals that meet all VOC regulations nationwide.

- DIAMOND CLEAR VOX AND SUPER DIAMOND CLEAR VOX are the best choices for curing and sealing concrete outdoors. They are formulated with unique additives that prevent yellowing and discoloration of the sealer film, even when exposed to direct sunlight.
- For interior applications, or anytime a low-odor product is required, professionals choose AQUA-CURE VOX and SUPER AQUA-CURE VOX. These products cure, seal, dustproof, and harden concrete, drying to a clear protective film that resists yellowing under exterior or ultraviolet exposure.

The "SUPER" formulations of AQUA-CURE VOX and DIAMOND CLEAR VOX are high solids, high performance products that offer superior curing efficiency and long-term durability.

BrownTone CS

A solvent-based acrylic polymer blend, BrownTone CS cures, seals and protects against the damaging effects of traffic, weather, and de-icing salts, while enhancing the appearance of exposed aggregate concrete surfaces. BrownTone CS is specially formulated with earth-toned pigments that highlight the natural color of the aggregate, making exposed aggregate surfaces look more uniform in color and richer in appearance. BrownTone CS can also be used on any concrete surfaces - new or old - where a translucent brown tint is desired.

Sealing Concrete—Penetrating Protection

Penetrating sealers that are made from silanes or siloxanes penetrate concrete pores and react with the alkaline materials and moisture in concrete. These sealers make the concrete water repellent and protected against chloride intrusion. Since penetrating sealers soak into concrete and become part of its surface, the penetrating protection lasts years longer than film-forming sealers.

EUCO-GUARD 100

For exceptional protection of concrete against the damaging effects of water and salt, EUCO-GUARD 100 is the choice of concrete contractors, municipalities, homebuilders and owners worldwide. EUCO-GUARD 100 is a penetrating siloxane sealer that reacts chemically with the concrete to form an internal screen against chloride and water – concrete's enemies! Water and chloride salts, if able to soak into concrete and reach reinforcing wire or bars, will corrode the metal, leading to cracking and a short concrete life span.

With EUCO-GUARD 100, the appearance of the concrete is not changed after the product is applied, but you'll know it's working when it rains and the concrete stays light in color...that's the effect of EUCO-GUARD 100 preventing water from soaking in.

EUCO-GUARD 100 has been tested according to the rigid NCHRP #244 protocol and meets all of the chloride screening, weight gain, and water repellency criteria of that standard.

EUCO-GUARD VOX

A water-based, penetrating siloxane sealer with all the benefits of EUCO-GUARD 100, EUCO-GUARD VOX is ideal for applications that require VOC compliance. Suitable for new, cured concrete or old concrete, as well as vertical surfaces, EUCO-GUARD VOX is provided in an easy-to-use, economical concentrate – just mix with water on the jobsite and apply.
