DRY PACK GROUT
Non-shrink Structural Grout

Description
DRY PACK GROUT is designed for use where high-strength, non-shrink characteristics are required. DRY PACK GROUT contains only natural aggregate and is designed to be mixed with minimum water for placement at a damp pack consistency where flowable, fluid or plastic grouts are not possible or desired.

Primary Applications
- Structural baseplates
- Equipment and machinery
- Precast elements

Features/Benefits
- Extremely cohesive at damp pack consistency
- Non-staining and similar to concrete in appearance
- Contains no chloride based or corrosive ingredients
- High compressive strengths for maximum bearing capability
- Non-shrink for long term support

Technical Information
Typical engineering data obtained under laboratory conditions.

Compressive Strength 2” (50 mm) cubes (ASTM C 109 Modified*)

* See ASTM C1107 Section 11.5

Appearance
DRY PACK GROUT is a free-flowing powder designed to be mixed with a minimum amount of water. After mixing and placing, the color may initially appear much darker than the surrounding concrete. While this color will lighten up substantially as the concrete cures and dries out, the grout may always appear somewhat darker than the surrounding concrete.

Packaging
DRY PACK GROUT is packaged in 50 lb (22.7 kg) bags. When mixed with .55 to .70 gal (2.08 to 2.65 L) of water, the yield is .40 ft³ (.011 m³) of material.

Shelf Life
2 years in original, unopened package

Specifications/Compliances
- Meets requirements of CRD C 621, Corps of Engineers Specification for Non-Shrink Grout. Note: The test method does not specifically make provision for the testing of damp pack consistencies. The procedures were modified to accommodate the placement of damp pack grout into the test mold.
- Meets the performance requirements of ASTM C 1107 (modified) standard specification for packaged dry, hydraulic cement grout (non-shrink).
**WARRANTY:** The Euclid Chemical Company ("Euclid") solely and expressly warrants that its products shall be free from defects in materials and workmanship for one (1) year from the date of purchase. Unless authorized in writing by an officer of Euclid, no other representations or statements made by Euclid or its representatives, in writing or orally, shall alter this warranty. EUCLID MAKES NO WARRANTIES, IMPLIED OR OTHERWISE, AS TO THE MERCHANTABILITY OR FITNESS FOR ORDINARY OR PARTICULAR PURPOSES OF ITS PRODUCTS AND EXCLUDES THE SAME. If any Euclid product fails to conform with this warranty, Euclid will replace the product at no cost to Buyer. Replacement of any product shall be the sole and exclusive remedy available and buyer shall have no claim for incidental or consequential damages. Any warranty claim must be made within one (1) year from the date of the claimed breach. Euclid does not authorize anyone on its behalf to make any written or oral statements which in any way alter Euclid’s installation information or instructions in its product literature or on its packaging labels. Any installation of Euclid products which fails to conform with such installation information or instructions shall void this warranty. Product demonstrations, if any, are done for illustrative purposes only and do not constitute a warranty or warranty alteration of any kind. Buyer shall be solely responsible for determining the suitability of Euclid’s products for the Buyer’s intended purposes.

---

**Directions for Use**

The contractor and engineer are encouraged to consult and review the Euclid Chemical bulletin “Cementitious Grout Application Guide”. The document offers instructions detailing the general installation of cement-based grout products from The Euclid Chemical Company.

**Note:** If the contractor is not familiar with standard grout placement techniques, a pre-job meeting is suggested to review the project details unique to the particular job. Contact your local Euclid Chemical Company representative for additional information.

**Mixing:** Water content will vary depending on temperature and relative humidity, but generally will fall between 0.55 and 0.70 gal (2.08 and 2.65L) per 50 lb (22.7 kg) bag. You must use a drill and mixing paddle when mixing DRY PACK GROUT.

**Placement:** Using a ramming device with a blunt end, pack the mixed grout into the void or space with sharp, quick blows. The use of hammers or mallets may also be helpful. Build up material until the space is full. Finish exposed edges as desired. Be careful during the packing process not to knock critical plates out of alignment.

**Curing and Sealing:** Proper curing procedures are important to ensure the durability and quality of the grout. Wet cure the grout for 24 hours. Then, cure the grout with a high solids curing compound, such as SUPER REZ-SEAL or SUPER AQUA-CURE VOX. All exposed grout must be cured.

**Clean-Up**

Clean tools and equipment with water before the material hardens.

**Precautions/Limitations**

- Keep grout from freezing until it reaches a minimum strength of 4,000 psi (27.6 MPa).
- Proper curing is required.
- Do not add admixtures or fluidifiers.
- Do not use material at temperatures that may cause premature freezing.
- Store product in a dry place.
- Follow ACI guidelines for grouting under hot and cold temperature conditions.
- In all cases, consult the Safety Data Sheet before use.
