

# ADMIXTURE DISPENSER SYSTEMS AND SERVICE

## DEPENDABLE, LOW-MAINTENANCE ADMIXTURE DISPENSER SYSTEMS

For over a century, The Euclid Chemical Company has supplied the global building industry with specialty products for the concrete and masonry construction markets, offering a full range of chemically engineered admixtures under the **Eucon** and **Plastol** brand names. With a support team of scientists, sales and customer service representatives, business development professionals and Dispenser Service Technicians, we've created multiple customizable dispenser systems to meet project-specific, site specific and general admixture management needs.

Our dispenser systems add efficiency, ensure consistency of material dosage, and require very little maintenance.

## TRADITIONAL AND CUSTOM DISPENSER AVAILABILITY

Euclid Chemical offers a wide variety of standard dispensers and systems, and we pride ourselves on our ability to customize a system to fit individual needs. Each customer's unique facility, site and environment is taken into consideration when designing a dispenser system. A consultation and site visit will help determine the needs of any facility or project site so the most appropriate dispenser system can be installed.

Dispenser systems can be as simple as an on-the-go portable unit on wheels, or as complex as a multi-component bottle feed containerized system.

## QUALITY COMPONENTS

Our high performance, durable dispensers consist of quality actuators, meters, pumps and tanks that resist a broad range of environmental conditions. Together with the assembly expertise of highly-trained Dispenser Service Technicians, these components help ensure that our machines are reliable, requiring minimal maintenance.

## TECHNICAL ASSEMBLY

Adhering to strict guidelines, Euclid Chemical's state-of-the-art Dispenser Center facility employs skilled Dispenser Service Technicians and Quality Control Technicians to construct and maintain machinery that meets the demands of modern construction practices. This technical staff assembles both traditional and custom dispensers, based on the needs of specific plants or project sites.

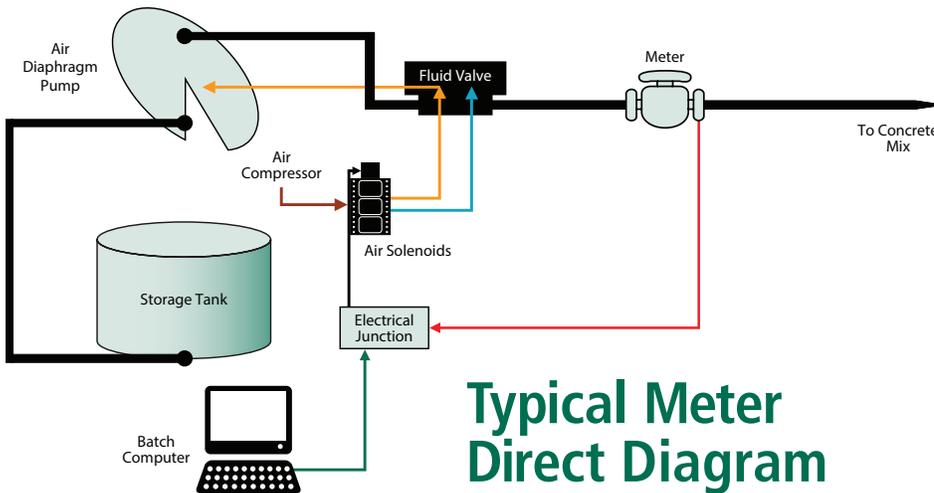

## EASY INSTALLATION

To minimize disruption and plant/job site downtime, Euclid Chemical will develop a schedule with customers to determine the least disruptive timing for system installation. Euclid Chemical Dispenser Service Technicians test and monitor the systems for accurate, efficient performance, and will establish a maintenance and calibration schedule with limited disturbance to customers.

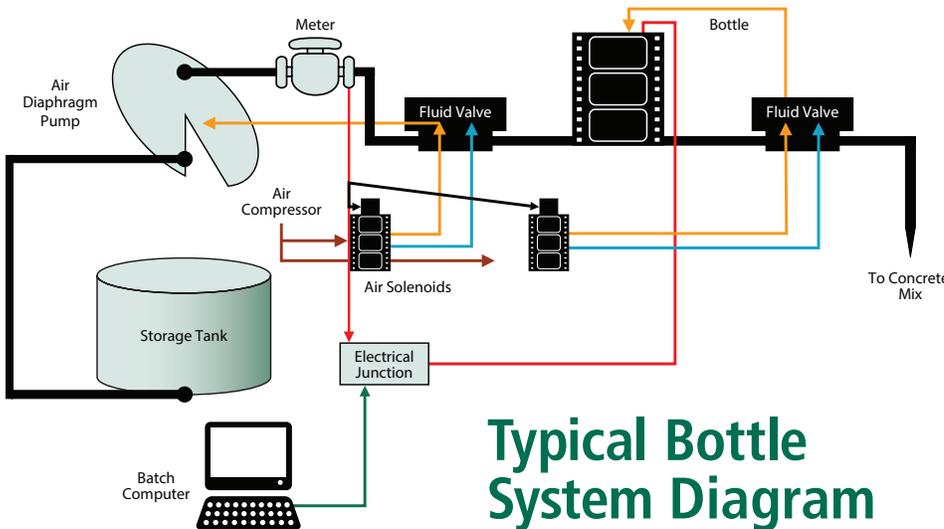

## SUPERIOR SERVICE

Euclid Chemical has built its reputation on putting people first. We recognize that our customers are vital partners in our mission to be world leaders in the concrete and masonry construction industries.

We have reliable, well-trained and dedicated Dispenser Service Technicians strategically located across the US and Canada to ensure a quick and competent response if an issue with a dispenser should arise.
