Re: **UltraSil Li<sup>+</sup>** - LEED™ Product Information

To Whom It May Concern:

The LEED (Leadership in Energy and Environmental Design) Green Building Rating System provides a standard for defining an environmentally friendly, sustainable, "green" building. Points are awarded to construction projects based on building characteristics like water savings, energy efficiency, indoor air quality, and the types of building materials used. The Euclid Chemical Company manufactures many products that can contribute points toward the LEED certification of a building.

UltraSil Li<sup>+</sup>, a water based silicate/siliconate concrete densifier and sealer that can contribute to the LEED points of a building based on its "low-emitting" qualities; that is, this product has a volatile organic compound (VOC) content of 0 (zero) grams per liter.

"Local/Regional Materials Manufactured Locally"- UltraSil Li<sup>+</sup> is manufactured at Euclid Chemical's Cleveland, Ohio plant, located at 19218 Redwood Road, Cleveland, Ohio 44110. If Cleveland, Ohio, falls within a 500-mile radius of the project site, the product is considered to be a locally produced material and can help contribute to earning (MR) Regional Materials Credit.

No single extracted material is used to produce the majority of this product. Additionally, all raw materials come from one of several sources which in-turn come from one of several raw material feed stocks. As such, point source for the raw materials cannot be determined.

If you have any further questions please contact me at 800-321-7628.

Sincerely,

*Aimee Pergalsky*
