EUCON AIR 40
AIR ENTRAINING AGENT FOR CONCRETE

DESCRIPTION
EUCON AIR 40 is formulated for use as an air entraining admixture for concrete of all types and is manufactured under rigid control which assures uniform and precise performance. EUCON AIR 40 adds microscopic air bubbles in concrete and works especially well with high carbon fly ash. EUCON AIR 40 does not contain added chlorides and will not promote the corrosion of steel.

PRIMARY APPLICATIONS
- Ready mix concrete
- Structural concrete
- Mass concrete
- Paving concrete
- All exterior concrete subjected to freeze/thaw cycling

FEATURES/BENEFITS
- Provides a stable air void system with proper bubble size and spacing which will increase durability.
- Concrete is made more resistant to de-icing salts, sulfate attack and corrosive water
- Less mixing water can be used per yard (meter) of concrete and placeability is improved
- Minimizes bleeding and segregation of the concrete

TECHNICAL INFORMATION
EUCON AIR 40 is an aqueous solution compound of synthetic organic chemicals. It is compatible with concrete mixes containing calcium chloride, water reducing admixtures, retarding admixtures, or high range water reducers.

PACKAGING
EUCON AIR 40 is packaged in bulk, 275 gal (1041 L) totes, 55 gal (208 L) drums and 5 gal (18.9 L) pails.

SHELF LIFE
2 years in original, unopened package.

SPECIFICATIONS/COMPLIANCES
EUCON AIR 40 meets or exceeds the requirements of the following specifications:
- Corps of Engineers Specification CRD C-13
- ASTM Specification C 260
- AASHTO Specification M 154
### Directions for Use

EUCON AIR 40 is typically dosed at a rate of 0.5 to 1.0 oz per 100 lbs (30 to 65 mL per 100 kg) of total cementitious material to entrain 3% - 6% air content. The amount of EUCON AIR 40 will vary depending on type of cement, fineness of sand, temperature, design of the mix, other admixtures, etc. Concrete mixes must be tested regularly to confirm that proper air content is achieved. EUCON AIR 40 should be added directly to the sand to achieve maximum performance.

### Precautions/Limitations

- Consult your local Euclid Chemical representative for the proper dosage rate adjustments when using fly ash, slag or high range water reducers.
- Add to the mix independent of other admixtures.
- Excessive air entrainment will lower flexural and compressive strengths so frequent testing is recommended.
- In all cases, consult the Material Safety Data Sheet before use.
