Eucon Baracade WPT

Description

Eucon Baracade WPT is a high performance liquid water repellent admixture used to improve the durability and surface integrity of concrete exposed to harsh weather conditions. By resisting moisture and chloride ion penetration, concrete produced with Eucon Baracade WPT reduces the potential for scaling, spalling, and other moisture-related degradation. The visual appeal of decorative concrete can also be improved by using Eucon Baracade WPT to decrease the potential for secondary efflorescence. Unlike topically applied sealers, Eucon Baracade WPT produces a chemically bonded and insoluble protection mechanism throughout the concrete mix. When concrete is produced with Eucon Baracade WPT, capillary pores become resistant to water penetration making it less susceptible to freeze-thaw and deicing salt related damage as long as the concrete is properly air entrained. Eucon Baracade WPT contains no added chlorides or chemicals known to promote the corrosion of steel.

Primary Applications

- Driveways, Sidewalks, and Patios
- Integrally colored decorative concrete
- Architectural precast concrete
- Other exterior concrete exposed to freeze-thaw cycles and deicing salts

Features/Benefits

- Reduces the intrusion of water and deicing chemicals into the concrete
- Increases resistance to weathering
- Reduces absorption rate and capillary wicking
- Improves color retention of integrally colored concrete
- Significantly reduces the potential for efflorescence

Technical Information

- Appearance: White, free-flowing liquid
- Specific Gravity: 0.96
- Freezing Point: 32°F (0°C)

Packaging

Eucon Baracade WPT is available in 275 gal (1041 L) totes, 55 gal (208 L) drums, and 5 gal (18.9 L) pails

Shelf Life

6 months in original, unopened container.
**WARRANTY:**

The Euclid Chemical Company ("Euclid") solely and expressly warrants that its products shall be free from defects in materials and workmanship for one (1) year from the date of purchase. Unless authorized in writing by an officer of Euclid, no other representations or statements made by Euclid or its representatives, in writing or orally, shall alter this warranty. EUCLID MAKES NO WARRANTIES, IMPLIED OR OTHERWISE, AS TO THE MERCHANTABILITY OR FITNESS FOR ORDINARY OR PARTICULAR PURPOSES OF ITS PRODUCTS AND EXCLUDES THE SAME. If any Euclid product fails to conform with this warranty, Euclid will replace the product at no cost to Buyer. Replacement of any product shall be the sole and exclusive remedy available and buyer shall have no claim for incidental or consequential damages. Any warranty claim must be made within one (1) year from the date of the claimed breach. Euclid does not authorize anyone on its behalf to make any written or oral statements which in any way alter Euclid’s installation information or instructions in its product literature or on its packaging labels. Any installation of Euclid products which fails to conform with such installation information or instructions shall void this warranty. Product demonstrations, if any, are done for illustrative purposes only and do not constitute a warranty or warranty alteration of any kind. Buyer shall be solely responsible for determining the suitability of Euclid’s products for the Buyer’s intended purposes.

---

**Precautions/Limitations**

- EUCON BARACADE WPT requires storage between 40°F (4°C) and 95°F (35°C); protect from extreme heat/direct sun and freezing temperatures.
- EUCON BARACADE WPT is intended for use with proper materials and mix designs that meet applicable building codes, standards, and ACI guidelines.
- EUCON BARACADE WPT has the potential to reduce compressive strengths. This reduction in strength may increase as the dosage of EUCON BARACADE WPT increases.
- Trial mixes with EUCON BARACADE WPT are recommended to determine dose response and the combined effect of other products used in the mix.
- EUCON BARACADE WPT is specifically intended for exterior applications and preferably broomed, flatwork finishes.
- In all cases, consult the Safety Data Sheet before use.

---

**Performance Characteristics**

**EUCON BARACADE WPT** has undergone extensive testing to examine its overall performance in concrete. These tests include:

- ASTM C39 Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens
- ASTM C192 Standard Practice for Making and Curing Concrete Test Specimens in the Laboratory
- ASTM C231 Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method
- ASTM C403 Standard Test Method for Time of Setting of Concrete Mixtures by Penetration Resistance
- ASTM C457 Standard Test Method for Microscopical Determination of Parameters of the Air Void System in Hardened Concrete
- ASTM C642 Standard Test Method for Density, Absorption, and Voids in Hardened Concrete
- ASTM C666 Standard Test Method for Resistance of Concrete to Rapid Freezing and Thawing
- ASTM C672 Standard Test Method for Scaling Resistance of Concrete Surfaces Exposed to Deicing Chemicals
- ASTM C1585 Standard Test Method for Measurement of Rate of Absorption of Water by Hydraulic-Cement Concretes

**Directions for Use**

**DOSAGE RATE:** EUCON BARACADE WPT is recommended for use at a rate of 1 to 6oz per 100 lb (65 to 392 mL/100kg) of total cementitious materials used in the mix. This range is dependent on the application, mix design, and targeted performance. For most applications, 3oz per 100 lb (196 mL/100kg) of total cementitious materials is recommended.

EUCON BARACADE WPT should be added after all materials are batched and mixed to the targeted slump range, then mixed for an additional 5 minutes.

EUCON BARACADE WPT may affect water demand and/or air content with a given set of materials. These properties and required mix adjustments should be determined through trial mixing.

EUCON BARACADE WPT is compatible with most Euclid Chemical admixtures as long as they are added separately to the concrete mix.

**CURING:** Proper curing of the concrete as-placed is essential. Any curing compounds used should be applied as early as possible after finishing.

**MIX DESIGN CONSIDERATIONS:** Minimum compressive strength at 28 days of 4,500 psi (31MPa); maximum water-cement ratio of 0.45
